MetaMe: Meta-communication for new community

Overview

We have begun first offer "MetaMe, "a meta-communication created through "39works, " an initiative started in 2014 for creating new businesses. You can see the world we aim to achieve through our initiatives which are focused on the three components of "meta-communication: Networks that can connect massive quantities of people, " "AI engines that comprehend values," and "the creation of new economies."

Vision

We will help transform exchanges of information to the exchanges of values through the arrival of Web 3.0 by working on "meta-communication", the entryway to exchanges of values. We will create a world in which anyone can make a new Identity or Community through meta-communication.

Future Challenges

We are working on solving problems related to the three aforementioned components in order to create a durable community. We will contribute to the formation of communities by working with "Web3 Enablers."

Feasible Future

Growth of values through next-generation communication experiences.

Shared experiences created by connecting massive quantities of people at the same time.

Creation of new economies that transcend the border between reality and the digital.

Connection with IOWN

By using disaggregated computing and data-centric models as a foundation, we aim to create enjoyable communication experiences, not simple multiplayer experiences between massive quantities of people in the metaverse.

Co-creating Partner

NIPPON TELEGRAPH AND TELEPHONE CORPORATION / Relic Inc.
TAKARAJIMA WONDERNET Inc. / Kotohira Town
