# 5G target performance

5G radio access will provide a total solution for a *wider range of requirements* in 2020 and beyond

# DOCOMO's 5G technical concept

Existing frequency bands  
(Saturated)

Higher frequency bands  
(Higher data rates using wider bands)

Wide  
(e.g. > 3GHz)

Super-wide  
(e.g. > 10GHz)

Frequency →

Connectivity and mobility  
maintained using lower  
frequency bands

Efficient high data rates  
transmission using higher/wider  
frequency bands

Further cellular  
enhancements

*Non-orthogonal multiple  
access (NOMA), etc.*

Exploitation of higher  
frequency bands

*Small cells, Massive MIMO,  
New RAT, etc.*

Frequency agnostic enhancements

*Phantom cell concept  
Radio frame design for reduced latency & M2M, etc.*

# 5G real-time simulator

- Real-time evaluation of 5G system performance and demonstration at ultra-dense environment (e.g., stadium)

- Demonstrations

- BW extension x NW densification
  - ✓ NW densification using small cells
  - ✓ BW extension at higher frequency bands
- Technologies for higher frequency bands
  - ✓ Massive MIMO @ Small cells: 128 antenna elements
- Download & play of high resolution movie (4K)

# 5G trials with Eight leading mobile technology vendors

## Existing bands

UHF bands  
Ex. 800MHz, 2GHz

## Exploitation of higher frequency bands

Low SHF bands  
3-6GHz

High SHF bands  
6-30GHz

EHF bands  
> 30GHz

Alcatel-Lucent 

HUAWEI

FUJITSU

NEC

  
ERICSSON

 MITSUBISHI  
ELECTRIC

NOKIA

<sup>NTT</sup>  
**docomo**

Alcatel·Lucent

## New 5G waveform

- For IoT, M2M
- Robustness for high mobility
- MIMO multiplexing for MBB

**NTT**  
**docomo**

**FUJITSU**

## Dynamic virtual cell

- Super high-dense deployments
- Flexible cell/antenna configurations
- Coordinated scheduling

4 antennas

32 antennas

Few units  
Many place

Flexible configuration

Many units  
Few place

<sup>NTT</sup>  
**docomo**

**NEC**

## Massive MIMO @ 5GHz

- Application to low SHF
- Multi-beam multiplexing
- Active Antenna System

### 128 antenna-element AAS

Antenna elements

**NTT**  
**docomo**

**ERICSSON**

## New radio interface concept

- New numerology for wider band and low latency
- Ultra high data rate
- Beamforming with massive antenna

<sup>NTT</sup>  
**docomo**

**SAMSUNG**

## Massive MIMO @ 28GHz

- Ultra wideband
- Beam-tracking at base station and user device

**NTT**  
**docomo**

**MITSUBISHI**  
**ELECTRIC**

# Multi-beam multiplexing

- Beamforming @ 44 GHz
- Virtual Massive MIMO for super high bit rate

# NTT docomo

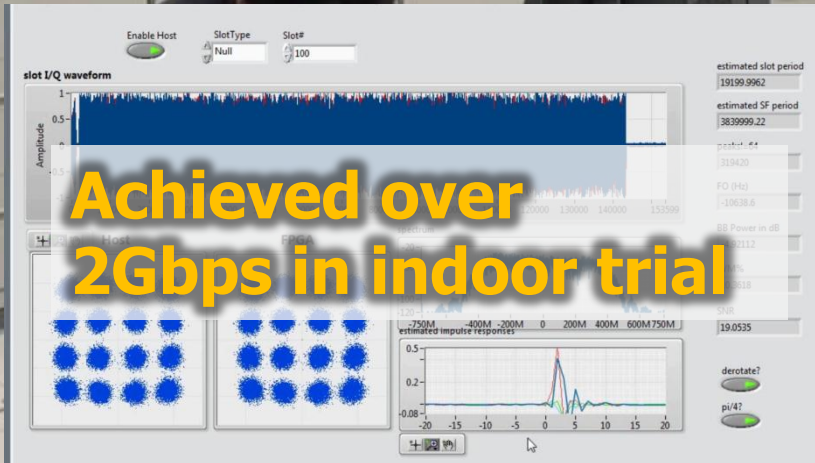

# NOKIA

## mmW radio access @ 70GHz

- For dense small cells and indoor/hotspot
- Beam tracking for mobility
- Ultra-wideband (1GHz)

**Achieved over  
2Gbps in indoor trial**

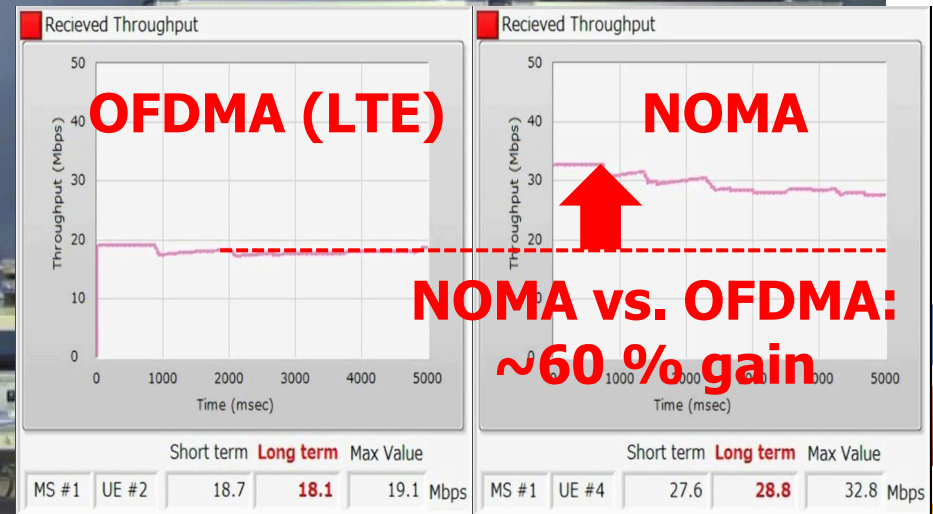

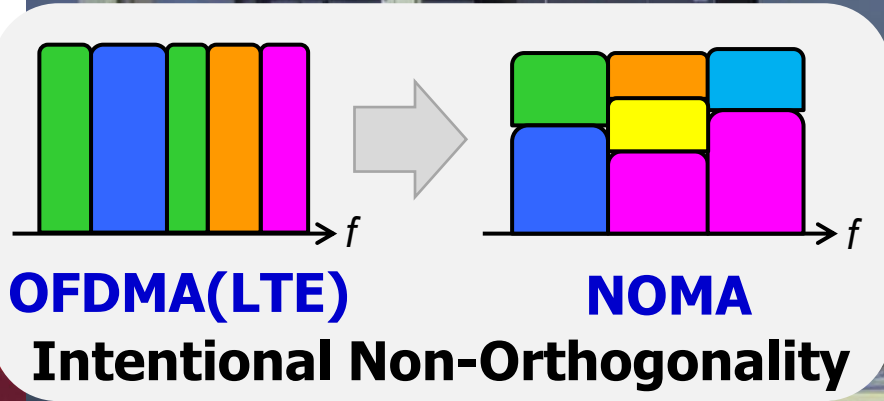

# Non-Orthogonal Multiple Access (NOMA)

## Advanced multiple access

- For further cellular enhancements
- Power-domain user multiplexing
- Advanced receiver (SIC)

# Channel Sounding at 20 GHz Band

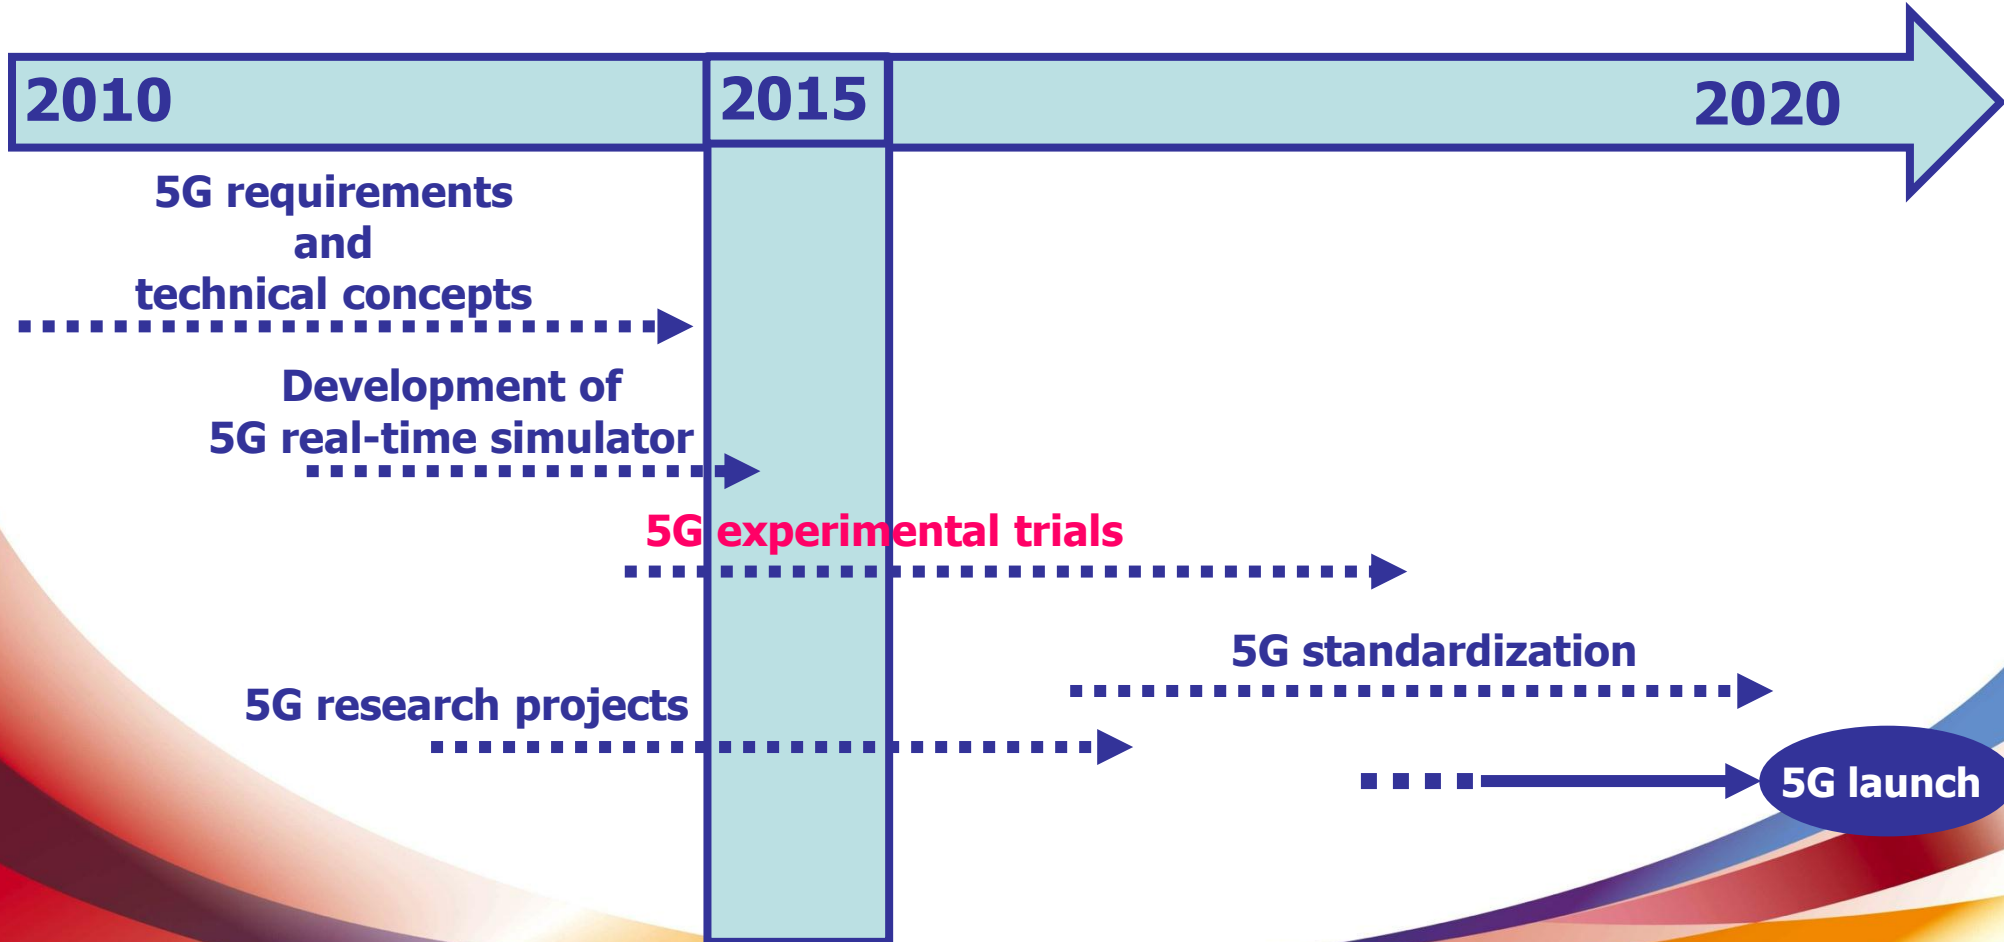

## Features of channel sounder

- Mu MIMO measurement
- Tx signal: OFDM signal with 50 MHz band width
- # of Tx antennas (or UEs): 2
- Rx antenna: Massive array antenna with 256 elements

**Rx antenna**

# Approach for DOCOMO's 5G launch

The image features the NTT docomo logo centered on a white background. The logo consists of the letters "NTT" in a small, red, sans-serif font positioned above the first letter of the word "docomo". The word "docomo" is written in a large, bold, red, lowercase sans-serif font. The background is white with decorative curved borders in red, blue, and orange at the top and bottom edges.
