Forward-Looking Statements

The forecasts presented herein are forward-looking statements within the meaning of Section 27A of the U.S. Securities Act of 1933 and Section 21E of the U.S. Securities Act of 1934. Statements made in this presentation with respect to DoCoMo's plans, objectives, projected financials, operational figures, beliefs and other statements that are not historical fasts are forward-looking statements about the future performance of DoCoMo which are based on management's expectations, assumptions, estimates, projections and beliefs in light of information currently available to it. These forward-looking statements, such as statements regarding the introduction of new products and services or termination or suspension of existing services, financial and operational forecasts, dividend payments, the growth of the Japanese cellular market and the ubiquitous services market, the growth of data usage, the growth of DoCoMo's cellular phone business, the migration of users to DoCoMo's 3G services and associated improvements in 3G services, improvements in 3G and 2G coverage area, the potential growth in the Japanese credit card business and DoCoMo's credit business, and managements goals are subject to various risks and uncertainties that could cause actual results to be materially different from and worse than as described in the forward-looking statements. Potential risks and uncertainties include, without limitation, as competition in the market is expected to become more fierce due to changes in the business environment caused by the introduction of mobile number portability and new market entrants, competition from other cellular service providers or other technologies could limit our acquisition of new subscribers, retention of existing subscribers and average revenue per unit (ARPU), or may lead to an increase in our costs and expenses: the new services and usage patterns introduced by our corporate group may not develop as planned, which could limit our growth: the introduction or change of various laws or regulations or the application of such laws and regulations to our corporate group may adversely affect our financial condition and results of operations: limitations in the amount of frequency spectrum or facilities made available to us could negatively affect our ability to maintain and improve our service quality and level of customer satisfaction: the W-CDMA technology that we use for our 3G system and/or mobile multimedia services may not be introduced by other overseas operators, which could limit our ability to offer international services to our subscribers: our domestic and international investments, alliances and collaborations may not produce the returns or provide the opportunities we expect: as electronic payment capability and many other new features are built into our cellular phones, and services of parties other than those belonging to our corporate group are provided through our cellular handsets, potential problems resulting from malfunctions, defects, or missing of handsets or imperfection of services provided by such other parties may arise, which could have an adverse effect on our financial condition and results of operations: social problems that could be caused by misuse or misunderstanding of our products and services may adversely affect our credibility or corporate image: inadequate handling of subscriber information by our corporate group or contractors may adversely affect our credibility or corporate image: owners of intellectual property rights that are essential for our business execution may not grant us the right to license or otherwise use such intellectual property rights on acceptable terms or at all, which may limit our ability to offer certain technologies, products and/or services, and we may also be held liable for damage compensation if we infringe the intellectual property rights of others: earthquakes, power shortages, malfunctioning of equipment, and software bugs, computer viruses, cyber attacks, hacking, unauthorized access and other problems could cause system failures in the networks required for the provision of service, disrupting our ability to offer services to our subscribers and may adversely affect our credibility or corporate image: concerns about wireless telecommunications health risks may adversely affect our financial condition and results of operations: our parent, NTT, could exercise influence that may not be in the interests of our other shareholders.

Further information about the factors that could affect the company's results is included in "Item 3.D: Risk Factors" of its annual report on Form 20-F filed with the U.S. Securities and Exchange Commission on June 27, 2006, which is available in the investor relations section of the company's web page at www.nttdocomo.com and also at the SEC's web site at www.sec.gov.

- Osaifu-Keitai e-wallet
- Security
- GPS/Navigation

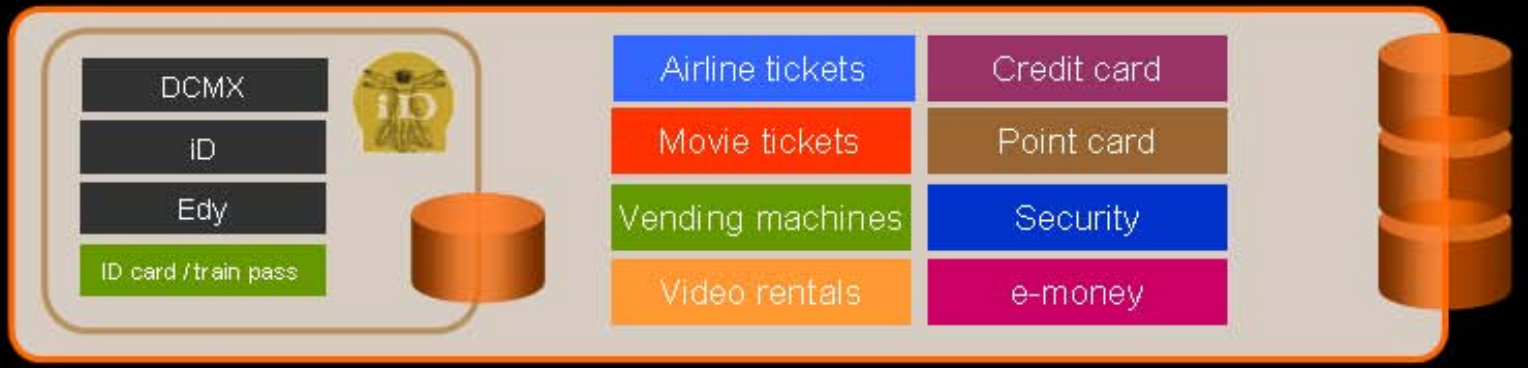
LifeKit

Combine extensive Osaifu-Keitai e-wallet and security functions in one handset, and bundle it with the added convenience of GPS-based navigation. Develop Japan’s most useful handset series: 903i.

Osaifu-Keitai e-wallet services enter new stage

Triple capacity for heavy users

Numerous applications now available!



New ToruCa services make info capture simple

More functionality!

Broader range of applications

Automatic recognition by reader/writer

Receive special promotions by merely waving handset, without having to show clerk the phone's ToruCa screen.

More customization for service providers

- Use ID number for proof of membership or lottery tickets!
- Flexible expiry periods (one week, one-time use, etc.)

iC Transfer Service

When purchasing a new handset, easily transfer e-money and downloaded application URLs to new phone

iC applications can be easily transferred to a new phone using a dedicated terminal located DoCoMo Shops, etc.

Transfer method may vary depending on the application.

Data exchange: From infrared to iC Communications!

iC Communications

Easily exchange data by holding one handset over another, using phones' built-in e-wallet reader/writers.

Can implement communications equivalent to infrared communication functions.

Simple because no operations are required on the receiving side.

External linkage of DoCoMo handsets is now fully enhanced!

- Infrared Communications
- External Memory Card
- Bluetooth

FeliCa smart chip reader/writer

IC Card Authentication with N903i

Once the handset's IC card is registered as a key, the handset can be locked/unlocked merely by waving it over a reader/writer, doing away with the need to punch in security codes.

Now offering full-spec "Anshin" services

あんしん DoCoMo

Anshin (peace of mind) services for worst-case scenarios, such as lost e-wallet phones (which are already safer than ordinary wallets).
